

HELP MY KID LEARN

SOME USEFUL WAYS OF REMEMBERING INFORMATION

- 1) A rhyme for remembering how many days are in each month:

“Thirty days has September,
April, June and November.
All the rest have thirty-one except
February which has twenty-eight,
but leap year coming one in four
February then has one day more.”

- 2) Another great way of remember how many days are in each month is to use your knuckles.
All the tops of the knuckles have 31 days, and all the dips between the knuckles have 30 days (except February of course). Start with January on the knuckle of your pointing finger, February is in the dip, March on the second knuckle, April in the dip between knuckles, and so on. After July on the fourth knuckle, go to the knuckles of the other hand and start with August on top of the first knuckle, September in the dip, and so on.
- 3) Here’s how to remember the planets in our solar system arranged in order according to their distance from the sun – My Very Energetic Mother Just Served Us Noodles. Again the first letter of each word will remind you of the planet names – Mercury, Venus, Earth, Mars, Jupiter, Saturn, Uranus and Neptune. Watch out, there are two “M”s, Mercury and Mars, so you have to remember which one comes first.
- 4) A rhyme that helps with spelling is "i before e except after c" which help you to spell words like "receive", "believe" and "ceiling" correctly.
